

RIDING THERAPY REHABILITATION METHODS OF CHILD CEREBRAL PALSY

Nina Ionatamishvili, Dimitri Tsverava, and Lali Avaliani

INTRODUCTION

Child Cerebral Palsy (CCP) is a serious perinatal pathology of the central nervous system and involves motor disorders of different intensity and combinations (Comiotto, 1988; Dunn, 1963; Eidinova, Pravdina-Vinarskaya, 1959). However, in addition to this simple view of it, quite a complex picture of disorders is hidden, including much more important disorders of mental functions including retardation.
